

Highlights

Low latitude geomagnetic response associated with intense geomagnetic storms: regional space weather in Mexico

Castellanos-Velazco, C. I., Corona-Romero, P., González-Esparza, J. A., Sergeeva, M. A., Caccavari-Garza, A. L., Gatica-Acevedo, V. J.

- Research of space weather activity over center of Mexico
- Analysis of differences in local and planetary geomagnetic responses during a geomagnetic storm.
- Study of ionospheric currents related to geomagnetic storms, known to drive local geomagnetic fluctuations.
